REGISTRATION FOR HONORS IN MARINE BIOLOGY

Student Name:

Student ID #:

Student Email:

Thesis topic:

Faculty Sponsor:

Expected term of graduation:

To graduate with honors in marine biology, students must meet the following requirements:

1. Completion of all the requirements for the major in marine biology.
2. A minimum cumulative GPA of 3.3 for all upper division biology courses required for the major.
3. All biology courses used to satisfy the marine biology degree requirements must be taken for letter grades.
4. Registration for the honors program before research begins. (This requires approval of the honors thesis topic by the faculty sponsor, the selection of a second member of the OIMB faculty to serve on the thesis approval committee – signatures required below).
5. A minimum of 6 credits of research over at least three terms of research; one of these terms can be accomplished on the main campus while the thesis is being written. That term may, however, require periodic visits to OIMB.
6. Completion of a thesis, based on laboratory and/or field research that is approved by the OIMB faculty advisor and one other member of the OIMB faculty. These two pages should be included at the front of the thesis: a title page and the thesis defense committee approval. A final copy of the thesis is to be submitted to the OIMB library.
7. A public defense of the thesis at OIMB.

I agree to serve as the faculty sponsor for this student and assist with the completion of the requirements for graduation with honors in marine biology.
